

PARTICIPANTS NEEDED

Research to Help Evaluate the Ability of Driving for Seniors

Are you 65 years old or above?

Do you have concerns about your driving safety?

Please consider joining our study!

We are researchers from the Michigan State University Colleges of Engineering, School of Social Work, and Human Medicine. We are conducting a study to enhance driving safety for older adults through behavioral assessments. We will develop technology to help older adults to maintain independence and driving safety.

We are looking for volunteers to participate in a real-world driving simulation study in our laboratory. The whole process will be completed within one hour.

You can help us by 1) completing a ~20-minute driving test using a driving simulator in our lab; and 2) taking a ~20-minute survey about your driving habits and daily activities.

To sign up or if you have any questions,

Please contact Mr. Yimeng Liu at 301-263-5191 or liuyime2@msu.edu

You will conveniently participate in the study at the Michigan State University East Lansing campus. We will schedule your visit that fits your schedule.

You will receive a \$40 Gift Card after completing study activities.
